Re: Docket ID: APHIS-2012-0030

ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Wild type eucalyptus trees are fast growing but not freeze tolerant, but are considered an invasive species in Spain and California, where they have escaped from tree farms and arboretums and now displace native species which they can easily outcompete. Freeze tolerant eucalyptus presents a grave threat to more northern climates, and could displace pine, maple, hickory, ash, and any other economically and ecologically valuable trees in their native ranges. Please reject ArborGen's request for nonregulated status of freeze tolerant eucalyptus trees.

Sincerely,

Evan M.

Re: Docket ID: APHIS-2012-0030

I have a degree in biology and am strongly opposed to genetically engineering general, and trees in particular. The likely risks are known: ArborGen's genetically engineered eucalyptus trees would certainly endanger biodiversity, and harm local communities and would likely be disastrous for public health, workers, the climate and the environment. Reject the company's request for nonregulated status of freeze tolerant eucalyptus trees."

Sincerely,

Ann F Hammond

Re: Docket ID: APHIS-2012-0030

What a horrific concept -- GM trees, especially eucs which are very invasive, very difficult to eradicate, and very dangerous in terms of fire, as I learned when I was a Disaster & Fire Safety Commissioner. We are getting FEMA funds to remove thousands of them, but they come back, so the agencies are using thousands of gallons of Monsanto toxic herbicide, against the will of residents, but the trees still re-grow. . Re: Docket ID: APHIS-2012-0030

What a stupid idea, messing with Mother Nature is bad. It isn't important to make frost-resistant-eucalyptus trees not when regular ones are plentiful..."ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Reject the company's request for nonregulated status of freeze tolerant eucalyptus trees." Stop this senseless madness. No GMO trees!!! (No GMO anything for that matter!!!)

Sincerely,

N C

Re: Docket ID: APHIS-2012-0030

So...now besides the Cell Towers disguised as trees, now trees will be GE as well? Would that be for the GE birds and other GE wildlife: bees/butterflies and all pollinators that will be next to be GE? Might as well since our GMO food and 24/7 Radiation from ALL things wireless are killing Biologically NORMAL Life Forms. Gee! This ought to tie-right in with the AI People that are being planned to roll out. Pretty soon there will be NO Life that is NOT Artificial. NICE GOING! Got kids and grandkids? Be sure and tell them they are an endangered species and their time here is limited! "ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Re: Docket ID: APHIS-2012-0030

We are many years away from it being safe to allow any genetically modified organism to have nonregulated status. It is essential that we take the introduction of genetically modified organisms, whether trees or microbes, very seriously and very cautiously. We don't know what we don't know. Maybe they're safe. Maybe they aren't. It would be an abuse of the public trust to assume it's ok to put organisms into the world with no controls (though those controls are extremely vulnerable to failure) just because we don't know for certain right now of any devastating effects they will have. The smart move is to go very, very slowly. Don't leave blocks of C\$ lying around just because you've never seen it explode.

Re: Docket ID: APHIS-2012-0030

Trees are among the beings that cradle us, shelter us, nurture us, heal us. Without trees continuing to exist, in their free and wild state, in their natural communities, we would die out. How can we allow a corporation to damage the health of the home that sustains us? As fellow beings, and as their dependents, we owe trees our respect and care. "ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Re: Docket ID: APHIS-2012-0030

To know the disaster eucalyptus trees have been to the US you only have to look to California. Someone once thought it would be a good lumber tree and introduced them. It isn't and is responsible for raging forest fires when the sap in it heats and explodes, sending sparks everywhere and igniting more fires. It is a nonnative weed tree and prolific seed producer. Don't do it! Bamboo seems to hold potential as a pulp source, but that too is very invasive. Native trees are always the best and support wildlife who have adapted over the millennia along with the trees to produce a healthy environment. ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Reject the company's request for nonregulated status of freeze tolerant eucalyptus trees. In addition, applying toxic herbicides and clear cutting in these "plantations" is bad and will accelerate climate change and pollution of air, land and water. Overall a VERY BAD IDEA!

Sincerely,

Mr. Diane and Jerry Jerry Balin PHD

Riverside, IL 60546

Re: Docket ID: APHIS-2012-0030

"ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Reject the company's request for nonregulated status of freeze tolerant eucalyptus trees." Eucalyptus, native to the Australian Region, is an exotic genus of trees to North America, and the Hawaiian Islands. It is regarded as a pest and fire hazard in the Bay Area, particularly around Berkeley, CA. It should be eliminated in North America, instead of being "improved" genetically. The presence of this genus is a threat to the biodiversity of all areas outside of its normal range in the Australian Region.

NEWARK, OH 43055-5936

Re: Docket ID: APHIS-2012-0030

Eucalyptus trees are a major problem in CA. They kill everything under them, they easily blow over, they drop large branches and are hard to work on. ArborGen's genetically engineered eucalyptus trees would be even worse, endangering biodiversity, harming local communities and be disastrous for public health, workers, the climate and the environment. Reject the company's request for nonregulated status of freeze tolerant eucalyptus trees."

Sincerely,

Kim Atkinson
PO Box 703
SEBASTOPOL, CA 95473-0703

Re: Docket ID: APHIS-2012-0030

"ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Reject the company's request for nonregulated status of freeze tolerant eucalyptus trees." Trees carry within them millions and millions of years of bio- intelligence, related to protecting their survival by maintaining a healthy immune system. Because we have a bio-compatible relationship with trees, we can heal ourselves with this same biological essence. Altering the trees genetics POISONS them and POISONS the ecosystem and POISONS us!

Sincerely,

Antonia Tancredi

Re: Docket ID: APHIS-2012-0030

"ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and prove disastrous for public health, and for workers, and for the climate and the environment. Diversity and evolutionary change are the keys to ecosystem adaptation and to the functioning of earth's carbon, water, nutrient and energy cycles. Genetic modification ensures disruptive effects on intricate interrelationships, everywhere from the soil microorganisms to the clouds and rainfall. Everything is connected to everything else; tinkering with plant genetics is throwing a monkey wrench into a Whole of which we are part, and which we scarcely comprehend---although we are totally dependent on it! Reject the company's request for non-regulated status of freeze tolerant eucalyptus trees."

Re: Docket ID: APHIS-2012-0030

Reject ArborGen's request for nonregulated status of GE freeze tolerant eucalyptus trees. All GE plants and animals need to be highly regulated for the safety of our citizens. Genetically engineered trees cross pollinate and would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. As mono-culture farms these GE tree plantations will be vulnerable to disease and so are designed to withstand massive amounts of toxic pesticides and herbicides, pesticides that endanger the health of people, pollinators and our water systems.

"ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Reject the company's request for nonregulated status of freeze tolerant eucalyptus trees." My personal addition to this has to do with the unknowable nature of the long term effects of these trees. Trees have a much longer lifespan than food crops, surviving for decades or even centuries, and considering how many seeds can spread every year, the population will be out of control almost immediately. You simply cannot put the toothpaste back into the tube, and once the trees are deregulated, it's completely out of your hands.

Re: Docket ID: APHIS-2012-0030

"ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Reject the company's request for nonregulated status of freeze tolerant eucalyptus trees." I fail to see any public good in the privatizing of plant genomes for the whimsical objectives of large companies. There is nothing wrong with eucalyptus trees; they don't need to be genetically altered. This does not cure a disease or protect a biome or improve on what took millions of years to evolve.

Sincerely,

George Leddy

Van Nuys, CA 91401

Re: Docket ID: APHIS-2012-0030

Do you know how many ways "ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment? The only reason the GM trees are 'pest-resistant' is because they're engineered to tolerate overdoses of pesticides! And, since the GM tree seeds and pollen can travel hundreds of miles, this genetic material could irreversibly contaminate native trees! Workers and local communities would be exposed to high levels of toxic herbicides and pesticides applied to GE tree plantations. Furthermore, since many of these fast-growing forests will be clear cut and sold as biofuel replacements and for wood pellet incineration, massive amounts of carbon would be released into the atmosphere accelerating global warming. Please, please reject the company's request for nonregulated status of GM eucalyptus trees."

Re: Docket ID: APHIS-2012-0030

Once you release GMO's into the environment, there is no take backs. That pollen travels with the wind and now you have made an irreversible change. Maybe its fine, maybe there are safeguards we can take, maybe its only a bad idea. Study it before you rush something to market that could have irreversible changes to Earth.

Sincerely,

Ben Graham

Re: Docket ID: APHIS-2012-0030

There are reasons we protect our native environment against invasive species. Introducing species with no natural "predators" or curbs invites overgrowth and ultimately destruction of natural native flora. "ArborGen's genetically engineered eucalyptus trees would endanger biodiversity, harm local communities and be disastrous for public health, workers, the climate and the environment. Reject the company's request for nonregulated status of freeze tolerant eucalyptus trees."
